

Introduction to IoT English 1120 dm

Started on Tuesday, 2 February 2021, 4:39 AM

State Finished

Completed on Tuesday, 2 February 2021, 4:43 AM

Time taken 3 mins 47 secs

Marks 30.00/30.00

Grade 100.00 out of 100.00

Question 1

Correct

Mark 2.00 out of 2.00

Flag question

What type of device could allow a refrigerator to place a replacement order for an item contained within it?

Select one:

- sensor
- generator
- smart phone
- digital network

Refer to curriculum topic: 1.1.1

Sensors can be used to detect motion, water levels, light levels, temperature, and other measurements such as the weight of the milk carton within a smart refrigerator that could place a replacement order for the milk.

The correct answer is: sensor

Question 2

Correct

Mark 2.00 out of 2.00

Flag question

Which command is used to test network connectivity and provide a response to each packet received by the remote host?

Select one:

- tracer
- connect
- text
- ping

Refer to curriculum topic: 1.1.2

The ping and tracer commands are both used to test connectivity. The ping command is used to test connectivity from one network device to another network device. The tracer command is used to trace a route from the source network device to another network device.

The correct answer is: ping

Question 3

Correct

Mark 2.00 out of 2.00

Flag question

What is needed in a smart home to connect sensors and smart devices to a network?

Select one:

- Packet Tracer
- home gateway
- Bluetooth
- internet connection

Refer to curriculum topic: 1.2.1

In a smart home, IoT devices connect to the network through a home gateway device.

The correct answer is: home gateway

Question 4

Correct

Mark 2.00 out of 2.00

Flag question

Which tool allows a user to simulate real networks?

Select one:

- Packet Tracer
- PAN
- artificial intelligence
- internet

Refer to curriculum topic: 1.1.1

Packet Tracer is a free network simulation and visualization tool.

The correct answer is: Packet Tracer

Question 5

What is the core component of Intent-Based Networking?

Question 5
Correct
Mark 2.00 out of 2.00
 Flag question

What is the core component of intent-based networking?

Select one:

- fog computing
- the internet
- artificial intelligence 
- the cloud

Refer to curriculum topic: 1.2.2

Artificial intelligence will allow Intent-Based Networking to automatically configure network device across the network to fulfill network requirements based on the intent of those requirements.

The correct answer is: artificial intelligence

Question 6
Correct
Mark 2.00 out of 2.00
 Flag question

Which type of network is used to connect a company located in one area of a city to another location in a city far away?

Select one:

- MAN
- PAN
- LAN
- WAN 

Refer to curriculum topic: 1.1.2

Wide-area networks (WANs) provide inter-LAN connectivity between sites.

The correct answer is: WAN

Question 7
Correct
Mark 2.00 out of 2.00
 Flag question

What is a sensor?

Select one:

- anything that stores data
- something that provides products and services to customers through an internet connection
- the foundation of the digitized world
- a device that detects or measures an event or physical property 

Refer to curriculum topic: 1.1.1

Sensors detect or measure and send that data to be processed and analyzed. Sensors can detect motion, water levels, light levels, temperature, and color.

The correct answer is: a device that detects or measures an event or physical property

Question 8
Correct
Mark 2.00 out of 2.00
 Flag question

Which type of computing is located at the edge of a business or corporate network and that allows data from sensors to be preprocessed?

Select one:

- internet
- WAN
- fog 
- wireless

Refer to curriculum topic: 1.1.2

Fog computing contains servers and intelligence that allows data from sensors to be preprocessed and available for immediate use and sent into the cloud for more in-depth analysis.

The correct answer is: fog

Question 9
Correct
Mark 2.00 out of 2.00
 Flag question

Which type of wireless network is used to connect devices within a city to create a metropolitan-area network (MAN)?

Select one:

- ZigBee
- WiMAX 
- LTE
- Bluetooth

Refer to curriculum topic: 1.1.2

WiMAX uses the IEEE 802.15 standard to create a metropolitan-area network (MAN) within a city. Bluetooth and ZigBee are used to create a personal-area network (PAN) and LTE is used in a cellular network.

The correct answer is: WiMAX

Question 10
Correct

True or False?

Once connected to the home gateway, smart devices can be controlled from a smartphone, tablet, or PC.

Mark 2.00 out of 2.00
 Flag question

Select one:
 false
 true ✓

Refer to curriculum topic: 1.2.2

The correct answer is: true

Question 11
Correct
Mark 2.00 out of 2.00
 Flag question

True or False?

The Internet of Things can help organizations improve the efficiency and productivity of manufacturing processes and operations.

Select one:
 true ✓
 false

Refer to curriculum topic: 1.2.1

The correct answer is: true

Question 12
Correct
Mark 2.00 out of 2.00
 Flag question

What information is conveyed by the SSID that is configured on an IoT device?

Select one:
 the registration server
 the home gateway
 the default gateway
 the wireless network ✓

Refer to curriculum topic: 1.2.2

The SSID is used to identify the name of the wireless network which a device can join.

The correct answer is: the wireless network

Question 13
Correct
Mark 2.00 out of 2.00
 Flag question

What allows digital devices to interconnect and transmit data?

Select one:
 a network ✓
 a sensor
 a global positioning sensor
 a smart phone

Refer to curriculum topic: 1.1.1

A network connects people and devices through wired or wireless means.

The correct answer is: a network

Question 14
Correct
Mark 2.00 out of 2.00
 Flag question

True or False?

The Internet of Things will connect inanimate objects to the network with intelligent sensors.

Select one:
 true ✓
 false

Refer to curriculum topic: 1.2.1

The correct answer is: true

Question 15
Correct
Mark 2.00 out of 2.00
 Flag question

What is comprised of millions of smart devices and sensors connected to the internet?

Select one:
 the data center
 the Internet of Things ✓
 the fog
 the cloud

Refer to curriculum topic: 1.2.1

The Internet of Things (IoT) consists of millions of smart devices and sensors connected to the Internet. The devices and sensors in the IoT collect and share data for use by business, cities, governments, hospitals and individuals.

The correct answer is: the Internet of Things
